PROFILE

Founding engineer mindset with 3+ years building and shipping AI products end-to-end in Python as the sole technical owner at a £20M+ business where I designed the architecture, wrote the code, worked directly with customers and leadership to scope solutions, and owned whether it worked. I build event-driven systems, production AI agents, and serverless cloud infrastructure from scratch. I don't wait for permission, I don't hand things off, and if something I built isn't great it nags at me until I make it better.

EXPERIENCE

Lead BI Engineer — sole technical hire · Wolf Group · Wolf Eyewear Ltd, London *Aug 2023 – Present*

- Shipped a production AI agent end-to-end - identified the customer pain (2-hr manual order processing), scoped the solution, built a Claude Vision agent that parses PDFs and pushes structured data into the ERP via API, deployed to production and owned it; 36/38 SKUs matched on first live test, 96% automation, task cut to under 5 minutes.
- Built event-driven backend systems on AWS - Lambda functions triggered by SQS queues, DynamoDB state store, API Gateway entry point for a production consignment management app handling 50+ locations daily; designed for reliability with idempotency safeguards and async processing throughout.
- Built CRM for the company and save operationally £10k+ and financially £40k+ annually.
- Worked directly with non-technical stakeholders (CEO, CFO, Sales, Ops) to understand their needs, scope solutions, and deliver outcomes presented AI strategy and technical roadmap to the board; translated messy business problems into clean, reliable software.
- Built Lupa a production text-to-SQL AI agent; worked with users to understand how they actually asked questions, iterated on the prompt architecture and validation layer based on real usage, shipped to production and drove adoption across non-technical teams.
- Architected the Wolf BI Agent using nao agentic framework with tool use, MCP integrations, and multi-step reasoning designed, evaluated with structured test sets, drove adoption, and maintained in production; the kind of hairy AI infrastructure problem others would avoid.
- Built 11+ ELT pipelines integrating Cin7, Xero (accounting & financial data), Shopify & Prospect CRM owned from design through deployment, monitoring, and maintenance; Xero financial data pipelines are directly relevant to accounting automation.
- Selected (application-only) for Flax × Founders Factory × AWS AI build sprint; gave a public talk on production LLM systems; active in the London AI builder and startup ecosystem.

TECHNICAL SKILLS

Python	Expert · FastAPI · boto3 · pandas · Streamlit · requests · 3+ years production Python
AI & Agents	Claude API · Anthropic SDK · OpenAI API · MCP servers · RAG · tool use · agent orchestration · nao · evals
Cloud & Infra	AWS (Lambda · SQS · DynamoDB · S3 · API Gateway) · serverless · event-driven · Docker · Git · CI/CD
Backend & APIs	REST API design · webhook integrations · idempotency · async processing · observability · error handling
Data	SQL (expert) · dbt · DuckDB · PostgreSQL · ELT pipeline design · Peliqan · Lightdash · Power BI
Learning	TypeScript (actively building - MCP server project in progress on GitHub)

NOTABLE PROJECTS

olist-project-agentic (github.com/Saipranoy/olist-project-agentic) - Public dbt + DuckDB + nao analytics agent; semantic SQL layer, MCP integrations, and LLM eval suite.

Wolf CMS - Production AWS serverless app (Lambda → SQS → DynamoDB → API Gateway) with idempotency safeguards.

Right to work: Skilled Worker visa — employer sponsorship required.
